INTRODUCTION

Each month Statistics Canada releases to the media and the public statistics on the labour force, the employed and the unemployed. The statistics from the Labour Force Survey are timely, and widely used. One of the major drawbacks to these data is the lack of good quality statistics for small geographic areas and for detailed cross-tabulation such as age by sex. This publication is an attempt to fill part of that gap.

Besides the Labour Force Survey (LFS) another source of information on the unemployed is the Unemployment Insurance Commission. Though Unemployment Insurance (UI) recipients or beneficiaries generally meet the public's concept of unemployed there are important differences between UI beneficiaries and the specific definition of unemployed as defined by Statistics Canada in the Labour Force Survey. These differences are explained later in the report.

The tables in Section A of this publication are tabulated from Unemployment Insurance (UI) beneficiary files prepared by the Canada Employment and Immigration Commission for Statistics Canada. In order to be a beneficiary a person must have received at least $1 in unemployment insurance benefits during a reference week. Though UI benefits are paid throughout the month the data on the beneficiary files relate to one week each month. For comparison purposes they relate to the same week as the Labour Force Survey reference week, usually the week containing the 15th. Information is presented for beneficiaries, regular beneficiaries, (persons receiving benefits while out of work) and regular beneficiaries without earnings.

Section B contains information on taxfilers with income for census divisions and the Province. This information is derived by Statistics Canada from the Income Tax File.

SECTION A

Definitions

In order to give a better understanding of the beneficiary data the definitions of unemployed and beneficiaries are given along with a description of the differences.

The Labur Force Survey produces monthly estimates of the unemployed. The unemployed is defined as follows:

"Unemployed persons are those who, during reference week:

a) were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work;

b) had not actively looked for work in the past four weeks but had been on layoff and were available for work;

c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from reference week, and were available for work."

Unemployment Insurance beneficiaries exclude a certain segment of the unemployed, as defined above, as well as including some people who are not unemployed. In these tables information is tabulated only for regular beneficiaries and beneficiaries without earnings. As stated earlier a beneficiary is any person who receives at least one dollar of benefits during the reference week and a regular beneficiary is a beneficiary who is receiving benefits because of being out of work due to layoff, quit, etc. The regular beneficiaries make up about 85% of all beneficiaries. The other beneficiary

types include fishing, sickness, maternity, training, etc.

A regular UI beneficiary without earnings is the closest conceptually that one can get to the definition unemployed used by the Labour Force Survey. Even so there are a number of differencs. The differences are outlined in Table 1 by comparing the various groups that are covered under one but not the other. Three of the major differences are:

1) those people who are looking for work and therefore are unemployed but do not qualify for UIC benefits. These people may be new entrants to the labour force may not have worked long enough to qualify for benefits or may have exhausted their benefits.
2) people who are receiving benefits but do not actively look for work and are therefore not considered to be unemployed by the LFS. This is often because they know there is no work available in the area.
3) Persons who have qualified for UI but are in the waiting period and not considered unemployed.

Comparisons

The average number of regular beneficiaries without earnings was 7,000 higher than the number of unemployed in 1983. This difference varies greatly throughout the year. In the winter months the number of beneficiaries may be over 20,000 higher and in the summer the number of beneficiaries may be lower than the number of unemployed. This wide variation throughout the year is due to the seasonality in the number of beneficiaries. The unemployed is reasonably stable throughout the year because many people enter and leave jobs without being classified as unemployed before or after their employment. Because of the seasonal nature of their occupations it appears that many people in Newfoundland do not actively look for work when they are laid off. This can be seen by looking at the months of October and November 1983. In

October there were 177,000 employed and this dropped to 164,000 in November, a decrease of 13,000 in the employed but the unemployed increased by only 3,000. A similar but reverse pattern emerges when comparing April and May 1983. In this case the employed increased by 15,000 but the unemployed dropped by only 1,000.

The graph, which follows, gives unemployed and regular beneficiaries without earnings by month from 1980 to 1983.

While the Labour Force Survey does not determine whether or not a person is receiving UI benefits, a special supplementary survey has been carried out in March of each year since 1979 that tabulates the number of persons who are not actively looking for work but who are interested in having a job. This is a large part of the difference between unemployed and the UI beneficiaries. Table 2, which follows, gives the labour force, unemployed, those interested in working but not actively looking and UI Beneficiaries for Newfoundland and Canada.

In Newfoundland an average of approximately 35,000 persons were available for work but not actively looking in March of 1981, 1982, 1983 and 1984, and most of these (over 80%) were not looking because of labour market related reasons. If these people had been actively looking for work in 1984 the number of unemployed would have increased by 66%. Whereas in Canada the numbers are much smaller proportionally and the increase would have been 30%.

Using the 1981 Census data comparisons of regular beneficiaries to unemployed have been made at various geographic levels in the province. For very small areas the ratio of beneficiaries to unemployed varies considerably between areas. This variability decreases as the size of the geographic areas

increase. Table 3, which follows, shows for the ten Census Divisions in the Province the poulation, unemployed, beneficiaries and the ratio beneficiaries to unemployed in June 1981.

Table 1
Differences Between Groups of Persons Included and Excluded from Unemployed Labour Force Survey and Claimants and Beneficiaries Unemployment Insurance Files

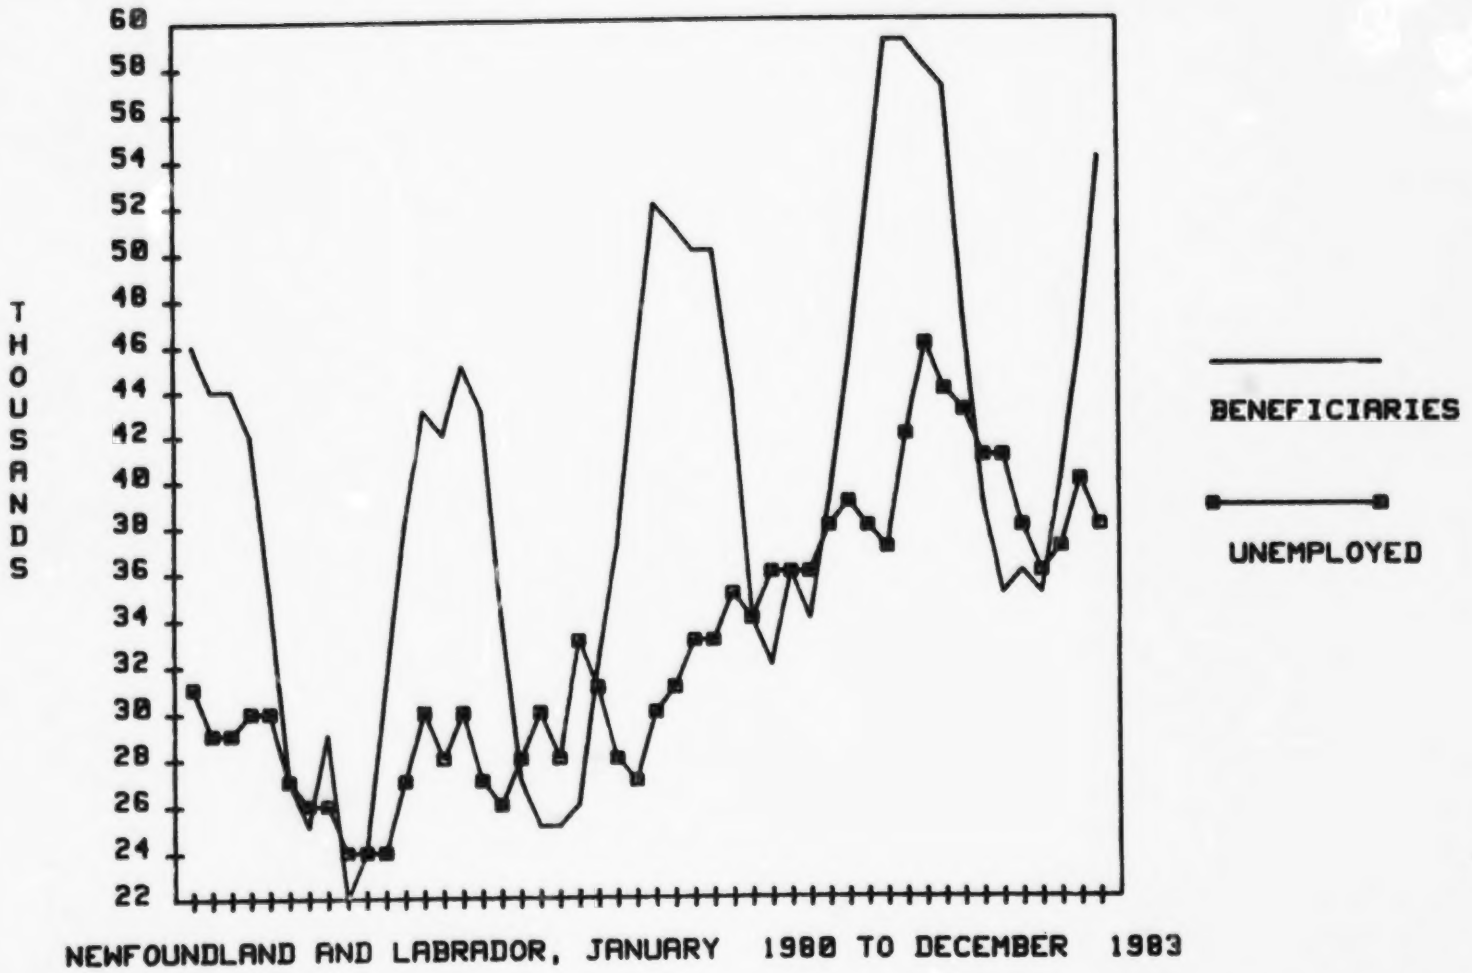
REGULAR BENEFICIARIES WITHOUT EARNINGS AND UNEMPLOYED, BY MONTH



NEWFOUNDLAND AND LABRADOR, JANUARY 1980 TO DECEMBER 1983

SECTION B

Definitions

The information in these tables is derived from taxfiler returns. Only those people who had income which is taxable during the year are included in these tables. The total income in the tables excludes non-taxable income such as the child tax credit and social services payments.

Employment Income is essentially income earned through working and includes: wages and salaries, commission income and self employment income.

Labour Force Income includes: employment income as defined above plus unemployment insurance (UI) benefits.

The Transfer Payments include: UI Benefits, Family Allowance, Old Age Security and Pension Benefits. Child Tax Credits are not included.

The Median Income is the income at which half of the persons have income below that level and half have incomes above that level. In the case of income the median is usually less than the mean* income because the incomes from people who receive very large incomes tends to raise the level of the mean income. The tables give information for the Provinces and for ten geographic areas called Census Divisions. There are ten Census Divisions in the Province and a map showing their boundaries follows.

* The mean income, often called the average, is the sum of all of peoples incomes divided by the number of people.

The comparisons of the Census Divisions to Newfoundland and Canada indicate whether or not the income in that area is below or above the median income for Canada. In the case of Census Division 1, Avalon Peninsula, the 1983 median income of $11,607 is 11% higher than the Provincial median income (index 111.0) and 17.3% lower than the Canadian median income (index 82.7).

Comparisons or Discussions

The income shown in the tables does not reflect the complete income picture. Some people who have income do not file a tax return for a variety of reasons. The coverage however is high. The UI Benefits reported here were 93% of UI Benefits paid out in 1983.

The median employment income of taxfilers in Newfoundland is lower than the Canadian but this should not be taken solely as an indication that wages are lower. A large portion of this difference is due to the seasonal nature of many jobs in Newfoundland. According to the SEPH Survey carried out by Statistics Canada the average weekly wage in 1984, excluding overtime, was $380.00 in Newfoundland and $395.00 for Canada.

When examining these data year to year keep in mind that income tax and unemployment insurance rules have changed over time. For example, in 1978 the minimum length of weeks required to draw UI benefits was increased from 8 to 10 weeks. This accounts for part of the drop in beneficiaries from 1978 to 1979.

Note

a. Data are presented for the ten Census Divisions and Census Consolidated Subdivisions. Census Consolidated Subdivisions or CCS's are small geographic areas containing incorporated communities and the surrounding unorganized area. They are identified by the Census Division they are in, numbers 1 through 10, and within the CD's by an alphabetic letter. See the enclosed map for the boundaries of CD's & CCS's.

b. The numbers in brackets following the names of the Census Divisions, the CCS's and the communities are the populations as of June 3, 1981, the most recent census.

Notes: 1 - Fishing benefits are paid only from November 15 through to May 15 each year and in order to give a better indicator of fishing beneficiaries the number shown is a five month average from December through to April.

2 - As the source for these tabulations is a Postal Coded file and since the boundaries of Post Offices and subsequently Postal Codes did not match the CCS boundaries exactly certain adjustments in the CCS boundaries & populations were made. In most cases where the population difference was 5% or less an adjustment was made. Where the boundary problems were more severe CCS's were combined.

Legend:

-	Nil
..	Not Available
x	Confidential
BEN	Beneficiaries
CONST	Construction Occupations
PROC	Processing Occupations (in rural areas this primarily represents fish plant workers)
RBWE	Regular Beneficiaries without Earnings

Source: Special tabulations done by the Administrative Data Development Division of Statistics Canada from Canada Employment & Immigration files.
